EDUCATION

University of Illinois Chicago

Expected: December 2025

Bachelor of Science in Computer Science

GPA: 3.85/4.0

Coursework: Advanced Data Structures and Algorithms, Artificial Intelligence, Database Management Systems, Machine Learning, User Interface Design and Programming, and Economics and Computation

Honors & Leadership: Dean's List (2022 – Present), Orientation Leader (2023), and CS Ambassador (2024)

SKILLS

Programming Languages: Python, JavaScript, Java, R, C++, C, SQL, C#, TypeScript, and Golang

Frameworks: React, Angular, Docker, Google Cloud Platform, AWS, TensorFlow, Django, and MySQL

AI Agents & LLMs: Fetch.ai uAgents, Anthropic Claude SDK, OpenAI API, Groq, LangChain, and n8n

WORK EXPERIENCE

Software Engineering Intern (Summer & Fall)

June 2025 – Present

Invision Capital

Chicago, IL

- Rebuilt Invision Capital's [website](#) on Webflow with a structured content management system. Deployed Google Analytics 4 and automated Attio lead routing, eliminating fragmented tracking and increasing qualified inquiries.
- Architected AI-powered workflows in n8n to source investors and targets, enrich data, and generate due-diligence checklists, reducing deal cycle work by almost 10%.
- Constructed a fixed-asset management app in React (Vite + Tailwind) with a Flask server and MySQL database that supports 7+ custom depreciation methods, helping maintain all company assets and supporting robust operations.

Lead Web Developer

July 2023 – August 2025

Engineering Administration at University of Illinois Chicago

Chicago, IL

- Built and managed UIC Engineering's 500+ pages WordPress site with custom JavaScript and RED integrations.
- Deployed Google Analytics 4 and Tag Manager for behavioral insights, leading to 2.6% increase in website traffic.
- Collaborated with the marketing team to update web content and analyze traffic trends for targeted ad campaigns.

Head Teaching Assistant (Advanced Data Structures and Algorithms)

January 2023 – May 2025

College of Engineering at University of Illinois Chicago

Chicago, IL

- Mentored and debugged code for 800+ students over 6 semesters, with a focus on data structures and algorithms.
 - Coached students with Optiver, Motorola, and Allstate on 200+ projects, guiding from development to deployment.
 - Led technical interviews, graded, and conducted debugging sessions for full-stack projects in React and Flask.
-

PROJECTS

[ArtSee](#): Agentic AI (Fetch.ai uAgents, Claude 4, Groq, React)

July 2025

- Built a collaboration app that matches creators and automates end-to-end, real-time deal negotiation with agents.
- Engineered a two-stage, rule-based and LLM-judged matcher with top-3 selection and adaptive-round negotiation.
- Used Claude 4 for accurate ranking and Groq for low-latency counteroffers, with schema checks and audit logs.

[Tariffarm](#): Winner of WildHacks at Northwestern University (Flask, Next.js, Gemini API, Auth0)

April 2025

- Created a full-stack international trade website enabling users to estimate import costs with real-time tariff data.
- Engineered a custom BFS-based trade optimizer that ran across land, sea, and air, enabling best trade decisions.
- Visualized optimal routes in amCharts/Next.js and used Gemini prompts to annotate maps with cost and timing.

[Super Health App](#): Winner of SparkHacks at University of Illinois Chicago (Tkinter, SQLite)

February 2024

- Developed a health assistant that unifies doctor search, prescription tracking, and mindfulness in one app.
- Structured data in a normalized schema with indexed tables to keep records consistent and queries fast.
- Implemented a rule-based scheduler for recurrences, dosing, conflict checks and content filtering in the database.

[ChatNexus](#): Machine Learning (PyTorch, Transformers, Tokenization, Pickle Serialization)

July 2024

- Designed GPT-style transformer LLM that learns character-level patterns to generate coherent text from raw data.
- Implemented transformer blocks with multi-head attention to produce high-quality text on large datasets.
- Built an OpenWebText pipeline with parallel decompression, vocabulary and tokenization, and serialized datasets.
